

CLAIMS: Please amend the claims according to the status designations in the following list, which contains all claims that were ever in the application, with the text of all active claims.

1. - 31. (CANCELED)

32. (WITHDRAWN) A device as recited in claim 31 wherein said device includes a pressure multiplying mechanism for amplification of the dispensing force resulting from said compressive deformation of said reservoir.

33. (WITHDRAWN) A device as recited in claim 28 wherein said squeeze actuation means comprises a plunger mechanism.

34. (WITHDRAWN) A device as recited in claim 28 wherein said squeeze actuation means comprises a button mechanism.

35. (WITHDRAWN) A device as recited in claim 28 wherein said squeeze actuation means comprises a siphon pump.

36. - 46. (CANCELED)

47. (NEW) An extremity-attachable device for storing and discharging skin treatment material, said device comprising in combination:

- a) a reservoir containing said skin treatment material;
- b) squeeze actuation means;
- c) inlet port means;
- d) outlet port means;
- e) inlet flow control means;
- f) outlet flow control means; and
- g) extremity attachment means,

said device capable of releasing an amount of said skin treatment material through said outlet port means when said actuation means is used, said inlet flow control means sealing said inlet port means during squeeze actuation for dispensing of said skin treatment material and said outlet flow control means sealing said outlet port means when said device is not squeeze actuated.

48. (NEW) A device as recited in claim 47 wherein said flow control means comprises valve means.

49. (NEW) A device as recited in claim 48 wherein said device contains an internal bladder for segregating an air volume internal to said dispenser from the volume of said skin treatment material contained within said device, thereby facilitating the use of said

device at arbitrary orientations with respect to gravity, independent of the relative viscosity of said skin treatment material, said inlet flow control means preventing discharge of air from said air volume and said outlet flow control means preventing air entry into said volume of skin treatment material.

50. (NEW) A device as recited in claim 48 wherein said valve means further comprises check valve means.

51. (NEW) A device as recited in claim 48 which includes:

- a) pump chamber;
- b) piston; and
- c) return spring,

wherein said piston is attached to said squeeze actuation means, translates within said pump chamber, upon squeeze actuation serves to displace hand treatment material through said outlet port means, and provides negative pressure to draw fresh hand treatment material into said chamber upon return to its unactuated position, said return spring providing force necessary to return said piston to its unactuated position.

52. (NEW) A device as recited in claim 47 wherein said reservoir comprises a deformable chamber and said squeeze actuation means comprises compressive deformation of said reservoir resulting in dispensing of said skin treatment material from said outlet port means.

53. (NEW) A device as recited in claim 47 in which said outlet port means includes provision for adjusting the character of the dispensed material flow from streaming flow to spray.

54. (NEW) A device as recited in claim 47 wherein said device is removably attached to said attachment means.

55. (NEW) A device as recited in claim 47 wherein said outlet port means comprises adjustable nozzle means.

56. (NEW) A device as recited in claim 47 wherein said attachment means contains a working fluid volume in fluid communication with the interior of said device so that said device can be actuated by squeezing of said attachment means.

57. (NEW) A device as recited in claim 47 wherein said device includes a watch.

58. (NEW) A device as recited in claim 47 wherein said device includes cap means removably covering said outlet port means.
